

One complete business communications solution One connection.

Complete, easy, affordable: phones, data, video, storage, internet and applications.

Linksys One delivers the tools your business needs to be successful – phones, data networking, high-speed Internet, business applications and much more – all on a single converged network, from a single source.

A single high-speed connection to your business provides:

- Combined phone calls, data networking and the Internet on one connection, reducing both your capital and operating expenses.
- Linksys One telephones use the Internet to make calls with premium voice quality and inexpensive phone rates.

- A high-speed office network with less complexity, more control, and rapid setup.
- Plug and Play technology that makes adding new phones and devices to your network as easy as plugging them in.
- Access to powerful yet affordable Internet-delivered applications that enhance the way you do business.
- Future capabilities such as IP videoconferencing and more.
- Ongoing network upgrades, support and remote management all included.
- Simple and low-cost billing for all converged services.

There are so many business benefits, where do we start?

One easy, affordable install

With Linksys One you won't need an IT staff member, nor will you need to pay for the costly installation of separate telephone and data networks. The whole solution comes pre-packaged and automatically configures itself giving you an Internet connection and phone service that's simple to maintain. It's easy to install in minutes unlike the hours and days it takes with other solutions.

One network you can count on

Linksys One builds powerful security, quality and reliability right into the network so that your communications are protected. Your network dynamically keeps all of your applications running at peak performance, ensuring premium service for phone calls and other mission-critical operations. And with the technology, leadership and experience of Cisco and Linksys behind you, your business is primed to grow.

One source

Instead of negotiating with different phone, Internet and networking companies, you have a single contact for everything – from adding a new staff member to adding new technologies. We ensure your business communications run smoothly, freeing you up to concentrate on business.

One connection

With Linksys One, complicated technology is a thing of the past. Simply plug in our intelligent IP data appliances and phones. The network instantly detects new Linksys One devices and automatically configures them for optimal performance and simple Web-based management. Everything is taken care of for you on one connection – not just your phones and high-speed data connection, but also network updates and new Internet-delivered applications and services.

Unlimited options

Every business has different needs, so you simply decide with your reseller which options you require – data, telephony, number of phones, Internet-delivered applications, and other customization. When an approved Linksys One reseller installs the equipment at your office, your custom settings are automatically activated, so your communications solution will be up and running immediately. New Linksys One intelligent devices – such as wireless access points, videoconferencing, Wi-Fi devices, USB and storage solutions – can be instantly added to your network with the same ease. As your business grows, expand the capacity of your Linksys One system easily and affordably. Linksys One takes the burden of communications technology away, leaving you free to focus on your business. It's not just a smarter communications solution, it's a smarter way of doing business.

Let's start now.

All it takes is a phone call. Contact your local Linksys One Reseller at 1-866-870-5823. A complete list of Linksys One Resellers can be found at www.linksysone.com

LINKSYS® **one**™
A Division of Cisco Systems, Inc.

IP Voice + Video + Data Network

Telephony

Our affordable Internet phones come with all the latest small business features, such as integrated voicemail and auto attendant. The large display is easy to follow and can feature company information and future options such as instant messaging or customer information. Staff will require minimal, if any, training in how to use them. And there is no central PBX to install, no special servers or modules to set-up, and nothing to configure. It's as simple as plugging in the phone and you're ready to make and receive calls.

Mobility

Moves, adds, and changes are simple. Plug in the phone to a network port and extensions and user profiles are completely mobile. So, if a staff member moves, it's a minor administration requirement, not a major provisioning headache. Linksys One supports wired and wireless devices, giving you the freedom to work seamlessly from anywhere, with the peace of mind that all your communications are just as secure and reliable.

High-speed Network

A high-speed office network provides a secure, reliable and integrated phone and data solution specifically tailored for small businesses. The network is automatically optimized so that when staff are browsing the Internet, sharing data, accessing applications, sending emails and talking to customers on the phone, there is no loss of quality. Linksys One even supports your legacy fax machines so you can keep your older equipment and upgrade later.

Storage

Intelligent storage solutions will integrate with other systems applications, such as phones and video devices, to record, store and monitor calls and to facilitate surveillance. Content may be backed-up locally or automatically by the Service Provider.

Internet-delivered Applications

One of the added benefits of Linksys One is that you will also get access to Internet-delivered applications that increase competitiveness without hefty price tags or licensing hassles. Your Service Provider hosts the applications on their servers, so you don't have to make the substantial investment. In the future, choose from value-added services like unified messaging, Web conferencing and many more.

Video

With the Linksys One solution you will enjoy future videoconferencing capabilities – saving travel time and expenses. You'll be able to set up video kiosks, enabling you to rapidly update and change displays – from company announcements to product advertisements or even staff training. If you have concerns about security, you'll also be able to add IP cameras and video surveillance tools to your network, keeping your work environment safer and protecting your company assets.

How does it work?

Forget the expense and hassle of separate networks for your phones and computers. Linksys One combines both into one unified solution, providing substantial savings in both upfront and ongoing costs. There's no need for costly IT support staff, either. With Linksys One technology, phones set themselves up automatically the minute you plug them into the network, letting staff get down to business right away. Our Plug and play technology makes management a snap by instantly detecting new Linksys One phones and devices, and automatically configuring them for optimal performance.
